NOT FINISH SMALL IS BEAUTIFUL

If you're looking for an LED desk lamp that is compact, can comfortably be clipped on and simultaneously produce high colour output without compromising on quality, then Kubo is your answer! At just over 10 cm high, it is available in five funky colours on the sparkling new gift range. Kubo, equipped with a matching flexible and robust 20W narrow beam, LED strip up to 100-120 quality range too. Go on, grab one of these. Website: www.giftplanet.com

Inspired by the traditional wooden pencil case, Caroline Olsen, an Eindhoven Design School alum, has now developed Kubo, a space saving lamp that in its open position glows brightly and diffuses the ambient light as it is tilted down. In practice, it is crafted from an easy-to-use range of black and grey painted aluminium. Website: www.carolineolsen.com

PLUGGED IN

The latest glowing device for your egg living... Here is the best finish and here your home into a high-tech home.

A TV MOUNTED ON THE HEADBOARD

Forget about headboard TV sets, we are talking about a TV set that is mounted on the headboard in a subtle way. The 200-inch wide screen set is made of wood and is mounted on the back of an elegant, minimalist wooden headboard on either side of the bed. At the same time, the TV set is made up of the 200-inch wide screen set in a simple, modern, and in a way that is not too obvious. The TV set is available in a 20" or 24" screen size. The TV set is a real space saver! Website: www.ikea.com

SPEAKERS FLUSHED INTO FLAT SURFACES

How often are you faced with alien-like boom boxes descending from your roof or a rather fat, unattractive sub-woofer occupying monumental space in your living room? Enter Invisible Loudspeakers by British company, Amina Technologies. Designed to be installed into walls or the ceiling below a final coat of finishing plaster, these flat panelled products are available at Sound of Music in New Delhi. The science employed is an interesting mix of an electrical tuning fork and lightweight composites.
